

NEW HEAD – 5 February 2022 – TRAFFIC PATTERNS AT FINISH

Please study the traffic pattern carefully and remember which slipway you launched from. The basin and slipways will become busy with returning crews all manoeuvring for their place in the queue. The water in the basin is liable to become quite 'bouncy' with a number of crews and launches circulating. The predicted gusty rain showers will also make conditions unpleasant.

Please be patient and vigilant and listen out for instructions from the marshals.
